

Lokstadt - townhouses, Winterthur

Where locomotives were once built, an urban living space full of forward-looking ideas is being created in the middle of Winterthur. The 17 townhouses with their partly historic facades border the Lokstadt area on its southwest side.

The project

The Lokstadt townhouses - like the entire site - are designed according to the goals of the 2000-watt society. They are built according to the Minergie-Eco standard, and special attention is paid to the choice of materials. For this reason, the townhouses are largely made of wood from the first floor up. The wooden construction remains clearly visible with the columns and beams in the interior. The ARGE KilgPopp Architekten and Baumberger & Stegmeier Architekten designed the townhouses with the partially historic facades. Timbatec was allowed to accompany the planning team in the areas of structural analysis, fire protection and works planning.

The construction

The townhouses creatively develop the industrial heritage. What is special about the buildings is that they have two different facades. Towards Jägerstrasse, the historic industrial look dominates with its partially preserved brick facades. Towards the pedestrian zone in the car-free and busy Werkgasse, large windows provide light and airiness. This means that the buildings will be dismantled down to the existing listed brick facade, and the wooden structure behind it will be erected.

The challenge

The timber construction behind an existing facade requires particularly precise measurements and a construction that is subordinate to the existing structure. The result: the security of the old town behind the brick facade and at the same time the advantages of modern timber construction in the middle of the city.

The facades are partially listed.

The building was deconstructed except for its facade.

Behind it, the new wooden building is being built.

Services of Timbatec

- SIA Phase 31 Preliminary design
- SIA Phase 32 Construction project
- SIA Phase 51 Implementation project
- SIA Phase 52 Execution
- SIA Phase 53 Commissioning
- Work planning 3D and 2D
- Fire protection planning
